

## Global Migration Flow Feedback Exercise

Feedback Team: World Languages Datavis

Names of team members giving feedback: Andreas Martinson, Janaan Luke, Rachel Berghout

The feedback we received:

- Relationship (chord) chart is easier to understand than a donut chart. Audience can compare countries' data and their overlap easier.
- Change the year dropdown box to a slider.
- Explain how year dropdown box and toggle button work when users interact with them, which charts are affected by them.
- Explain the data shown in the table.
- Add transitions to plots for whenever the user changes year or different country.
- For data points that don't contain values of immigration/emigration but instead a ".." display it as a number that is less than 100 or 1000.

The feedback is constructive and helpful. It helps us to notice some flaw in our design. To address the feedback we are going to do the following:

- Replace the donut chart with a relationship chart.
- We think the slider is harder for users to pick a specific year right away because they have to drag it back and forth.
- We will add some text to give users instruction on the dropdown box and the toggle button, and explain what data of each chart shows.
